

Project Name: Project 1 Minesweeper

Project due date: 09/20/2026

Meeting number: Scrum no. 2

Date: 09/16/2026

GitHub link: <https://github.com/byAnh-dev/EECS581-Project1-Minesweeper>

System Documentation link:

Previous Tasks:

Montaha:

- Calculate adjacent mine counts
- Guarantee first-click safety
- Implement flagging rules

Anh: Setup and initiate game board

- Translate the rules from the project description to contract to be reused in the game
- Initiate game board and provide cell access
- Place mine in the board

Sreeja:

- Worked on UI for picking out number of mines

Mariska:

- Worked on the UI figma wireframe of how the game will look like
- Created a prototype which will be translated to code afterwards

Shayaan:

- Added mine count input parsing and setup validation
- Cell coordination validation for click, keyboard, and text inputs
- Connected uncover (revealing) and flag inputs to the game logic functions

Kodai:

- Prepare for testing

Rijul:

- Handle one cell reveal, with all the input checks
- Auto open the safe area when you click a zero cell
- Detect win when all safe cell is uncovered
- End the game and show all mines when you hit one

This Week's Task:

Montaha:

- Review submitted tasks and ensure they're all working

Anh:

- Review submitted tasks, review new code incoming

Sreeja:

- Finalize UI
- UI panel for level

Mariska:

- UI for board and flag tracking
- Finalize UI

Shayaan:

- Review and connect all components

Kodai:

- Test

Rijul:

- Review submitted tasks, review new code incoming

Notes:

Future Tasks:

- Uncover an individual cell
- Reveal empty regions
- Detect victory
- Handle loss
- Build setup controls
- Display counters and status
- Connect the complete game
- Test board operations
- Test gameplay rules
- Run full game and stress tests

***System architecture (include the Personal-Hour estimation using the methodology discussed in class and actual personal hours)* -----Should be included on GitHub**
